Travis Hartman
Bio

Travis has decades of experience dealing with cyber security, telecommunications, and research. He has worked for companies ranging from startups to multi billion dollar organizations and served on advisory boards for multiple security vendors. Recently his research has expanded from forensics to drones. Travis first presented at InfoWarCon on using Lego robotics to extract data from VDI sessions.

Recently he served as the Battalion Commander for the highest rated signal training battalion in the Army. Presently he works with the USSOCOM as part of the organization that develops training and researches new techniques and procedures.
